

Monitoring sanitation and wastewater services for the Sustainable Development Goals

Submission status

Open

Submission deadline

01 February 2024

SDG targets 6.2 (use of safely managed sanitation services) and 6.3 (wastewater safely treated) seek to go beyond the toilet to ensure that sanitation services protect public health and the environment. Countries have begun to address data gaps along the sanitation service chain.

This collection of papers - a collaboration between the WHO/UNICEF JMP, UN-Habitat and npj Clean Water - will broadly explore efforts to monitor the full sanitation chain from containment, transport, treatment and final disposal or reuse. Authors are welcome to submit papers by 01 February, 2024, and those residing in lower and low-middle income countries are particularly encouraged. Article processing charge waivers are available to some authors.

For more information, see the collection website (link below and QR code above).
